PROFESSIONAL SUMMARY

Data Analyst and AI Automation professional with a strong foundation in data analysis, automation concepts, and logical problem-solving. Experienced in working with real-world datasets, performing data cleaning, analysis, and visualization to extract meaningful insights. Skilled in applying AI-driven approaches to optimize processes and solve practical problems. Demonstrates strong analytical thinking, structured problem-solving, and effective communication.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, JavaScript, SQL, NoSQL, HTML5, CSS3

Backend: Spring Boot, Spring MVC, Spring Security, RESTful APIs

Frontend: React.js, Tailwind CSS

Database: MySQL, PostgreSQL, MongoDB, Cassandra

Cloud & DevOps: Docker, Postman, Git, GitHub, Maven, CI/CD

PROFESSIONAL EXPERIENCE

GenAI Powered Data Analytics Virtual Experience | Tata iQ (Via Forage) *Present*

- Developed AI-driven predictive models to identify high-risk delinquent customers using techniques like logistic regression and decision trees.
- Analyzed customer data to uncover key risk factors and designed targeted intervention strategies to improve collections effectiveness.
- Developing an AI-powered automated collections framework to optimize and automate collection strategies.

PROJECTS

AI-Based Voice Authenticity Detection System | Github *Jan – Feb 2026*

- Vibe-coded a real-time API to detect AI-generated vs human voice across multiple languages using audio signal analysis and deep learning.

- Iteratively optimized inference flow to handle strict latency constraints (<10s), making the system deployable for real-time security applications.
- Built a complete end-to-end voice classification pipeline delivering structured outputs (classification, confidence, explanation) for real-world fraud detection use cases.

Travelling Salesperson Problem using MST-Based Heuristic | Github *Dec 2025 – Jan 2026*

- Developed a scalable solution for the Travelling Salesperson Problem using a Minimum Spanning Tree (MST) and DFS-based heuristic to efficiently approximate optimal routes in metric graphs.
- Impact: Reduced computation from 43+ billion possible routes (15 cities) to a single traversal, achieving > 99.999% reduction in complexity while maintaining near-optimal results

  (≤ 2× optimal TSP).

CERTIFICATIONS & ACHIEVEMENTS

- Participated in a National-Level India AI Impact Buildathon by GUVI (HCL), developing an AI-driven solution addressing real-world challenges such as safety and fraud detection with a focus on ethical and practical implementation.
- Competed in a hackathon at Siddhartha University(AP), designing and delivering a solution within a limited timeframe in a team-based environment.
- NPTEL Certification – Python Programming.
- NPTEL Certification – Database Management Systems.

EDUCATION

B.Tech in Computer Science | Data Science Specialization

Kakatiya Institute of Technology and Science, Warangal | CGPA: 9.1 / 10.0 *2023 – 2027*

Relevant Coursework: Data Structures & Algorithms, Machine Learning & AI, Statistics, Database Management Systems, Data Mining, Big Data Analytics.
